

Word Problem: update-target

Directions: Write a function 'update-target', which takes in the target's x-coordinate and y-coordinate and produces the next x-coordinate, which is 50 pixels to the right.

Contract and Purpose Statement

Every contract has three parts...

:

:

->

functionname

domain

range

#

what does the function do?

Examples

Write some examples, then circle and label what changes...

examples:

functionname

(

input (s)

) is

what the function produces

functionname

(

input (s)

) is

what the function produces

end

Definition

Write the definition, given variable names to all your input values...

fun

functionname

(

variables

) :

what the function does with its variables

end
